

The MOSDA Clipless Fastener

is unique

It has been so constructed that in the unlikely event of wear or accidental damage to the cutting and folding mechanism, this can be removed in one piece, and replaced instantly, merely by removing one of the side plates and unscrewing the knob

A spare cutting mechanism can be obtained at a nominal cost from your supplier

This machine has been thoroughly tested and passed by our inspector

The cut and fold in the adjoining column of this slip has been made by it as proof of satisfactory alignment of the mechanism before packing
