

## SPEEDEE ADD-A-MATIC INSTRUCTIONS

### TO ADD:

1. Clear all figures that show in the total window by pressing down the reset lever at the top left.
2. When you strike a key, the figure on the key will be shown in the total window. When additional figure keys are struck, the total will be shown in the window.
3. For figures from 6 to 9, strike TWO figures in the SAME column which add up to the desired number . . . 4 and 2 or 3 and 3 for the figure 6; 5 and 2 or 3 and 4 for the figure 7, etc.

### TO MULTIPLY:

1. Clear all figures that show in the total window.
2. To multiply  $123 \times 5$ , for instance, strike the figure 1 in the third column from the right five times, the figure 2 in the second column five times, and the figure 3 in the first column five times. The total window will show the correct answer - 615.
3. To multiply a larger number like  $975 \times 12$ , enter 975 twice; then moving one column to the left enter 975 once (this is equivalent to 9750). The total window will register the correct answer - 11,700.

To multiply by a larger number, operate on the same basis of moving decimally to the left. As an example:  $975 \times 123$ , enter 975 three times, then moving one column left enter 975 (or 9750) two times, then again another column left enter 975 (or 97500) once. The total will correctly register as 119,925.

The total is shown AUTOMATICALLY to a capacity of 999,999,999 or in dollars and cents \$9,999,999.99
